Iris Plants Database
This is perhaps the best known database to be found in the pattern recognition literature. Fisher's paper is a classic in the field and is referenced frequently to this day. (See Duda & Hart, for example.) The data set contains 3 classes of 50 instances each, where each class refers to a type of iris plant. One class is linearly separable from the other 2; the latter are NOT linearly

ggplot2

ggplot2

part of the [tidyverse](#)

3.2.1

Overview

ggplot2 is a system for declaratively creating graphics, based on [The Grammar of Graphics](#). It makes it easy to map variables to aesthetics, what graphical primitives to use, and it takes care of

Installation

```
# The easiest way to get ggplot2 is to install the whole tidyverse:  
install.packages("tidyverse")
```

```
# Alternatively, install just ggplot2:  
install.packages("ggplot2")
```

ggplot2
